

Hydrosphere

1. Hydrosphere (or sea) covers five-sevenths or more accurately 70.78% (36,10,59,226 sq. km.) of the total surface area of the earth.
2. Water is freely available in the gaseous, liquid and solid state.
3. It is necessary for carrying out chemical reactions within the bodies of the living organisms.
4. Water also dissolves and transports nutrients from the soil to the plants.
5. It is used by plants for making food.
